

Gitcoin Passport

The Gitcoin Passport is an app built by Gitcoin on top of the Ceramic Network, allowing users to collect various identity attestations like BrightID, Ens, Proof of Humanity, etc from around web2 and web3.

Why We Need Gitcoin passport

There is increasing need to protect quadratic funding from sybil attack.

because the system is vulnerable to gaming, verifying every user as a unique human is vital for legitimate outcomes.

Who Gitcoin Passport is for

- Humans

Gitcoin Passport can help people control

their data and bring them around the Internet. Since People are embedded in a network of relationships and communities it will projects like Gitcoin build the most transparent, legitimate, and fair governance systems possible.

- Projects

Gitcoin Passport establishes a standard way to bring evidence of personhood to these systems. Integrating the Passport into your application will help you lower your surface area for Sybil attacks, and enable new mechanisms for accrediting accomplishment, and new mechanisms for governance, all while building re-usable "reputation legos" that your users can take with them around the Web3 ecosystem.

- Communities

Helping your community members self declare their membership with the Gitcoin Passport is a powerful new way to build toward the Decentralized Society.

Conclusion

With Gitcoin Passport will help Daos will stop sybil attack will help quadratic funding and airdrop.
